

Freelance Service Marketplace Project Planning

Here's a comprehensive list of REST API endpoints for your **Freelance Service Marketplace Project**.

These endpoints cover the core functionalities for **user management, services, orders, reviews, and dashboards**.

1. Authentication Endpoints

Handle user registration, login, and account verification (Seller & Buyer roles).

HTTP Method	Endpoint	Description
POST	/auth/register/	Register a new user with role (Seller/Buyer).
POST	/auth/login/	Log in and obtain a token.
POST	/auth/logout/	Log out the current user.
POST	/auth/verify-email/	Verify user email before login access.
POST	/auth/token/refresh/	Refresh an expired JWT token.

2. Service Endpoints

Manage and retrieve freelance services.

HTTP Method	Endpoint	Description
GET	/api/services/	List all services.
GET	/api/services/?category=	Filter services by category (e.g., design, writing).
GET	/api/services/?sort=price_low	Sort services by price (low to high).
GET	/api/services/?sort=price_high	Sort services by price (high to low).
GET	/api/services//	Retrieve a specific service with seller details.
POST	/api/services/	Create a new service (Seller only).
PUT	/api/services//	Update a service (Seller only).

HTTP Method	Endpoint	Description
DELETE	/api/services//	Delete a service (Seller only).

3. Order Endpoints

Handle service orders and tracking.

HTTP Method	Endpoint	Description
POST	/api/orders/	Place a new order for a service.
GET	/api/orders/	List all orders of the current user.
GET	/api/orders/<id>/	Retrieve details of a specific order.
PUT	/api/orders/<id>/status/	Update the status (Pending, In Progress, Completed).
DELETE	/api/orders/<id>/	Cancel an order (Buyer only).

4. Review Endpoints

Buyers can rate and review services after completion.

HTTP Method	Endpoint	Description
GET	/api/reviews/service/<id>/	Get all reviews for a specific service.
POST	/api/reviews/	Add a review (Buyer only).
PUT	/api/reviews/<id>/	Update a review.
DELETE	/api/reviews/<id>/	Delete a review.

5. Dashboard Endpoints

Provide dashboards for Buyers and Sellers.

HTTP Method	Endpoint	Description
GET	/api/dashboard/seller/	Seller dashboard: services, orders, earnings.
GET	/api/dashboard/buyer/	Buyer dashboard: order history, reviews.

HTTP Method	Endpoint	Description
GET	/api/dashboard/notifications/	View notifications (order updates, reviews).

Models

1. User Model

Represents Sellers and Buyers.

Field	Data Type	Description
id	Primary Key	Unique identifier.
role	CharField	“Seller” or “Buyer”.
name	CharField	User full name.
email	EmailField	Unique email.
password	CharField (hashed)	Hashed password.
bio	TextField	Optional profile bio.
is_verified	BooleanField	Email verified or not.

2. Service Model

Represents freelance services posted by Sellers.

Field	Data Type	Description
id	Primary Key	Unique identifier.
seller	ForeignKey (User)	Service provider.
title	CharField	Service title.
description	TextField	Service description.
price	DecimalField	Service price.
category	CharField	Service category (design, writing, etc.).
delivery_time	IntegerField	Estimated delivery in days.
created_at	DateTimeField	Created timestamp.

3. Order Model

Represents orders placed by Buyers.

Field	Data Type	Description
id	Primary Key	Unique identifier.
buyer	ForeignKey (User)	Service purchaser.

Field	Data Type	Description
service	ForeignKey (Service)	Ordered service.
status	CharField	Pending / In Progress / Completed.
created_at	DateTimeField	Order created date.
updated_at	DateTimeField	Order updated date.

4. Review Model

Represents feedback given by Buyers.

Field	Data Type	Description
id	Primary Key	Unique identifier.
service	ForeignKey (Service)	Reviewed service.
buyer	ForeignKey (User)	Reviewer.
rating	IntegerField	Rating (1–5).
comment	TextField	Review comment.
created_at	DateTimeField	Review date.

5. Notification Model

Represents system messages for Buyers & Sellers.

Field	Data Type	Description
id	Primary Key	Unique identifier.
user	ForeignKey (User)	Recipient.
message	TextField	Notification text.
is_read	BooleanField	Read/unread flag.
created_at	DateTimeField	Sent date.

Relationships Summary

- **User** → One-to-Many with Service (Seller posts multiple services).
- **User** → One-to-Many with Order (Buyer places multiple orders).
- **Service** → One-to-Many with Order.
- **Service** → One-to-Many with Review.
- **Order** → Belongs to Buyer & Service.
- **Review** → Belongs to Buyer & Service.
- **Notification** → Belongs to User.
